

REES

DOUBLE WORM GEAR DRIVE

JACK

THE REES is the only jack with double worm-gear drive — the most efficient application of power known to mechanics. The Rees Automobile Jack shown here has 1000 pounds lifting capacity. With its convenient folding handle, it fits readily in any tool box. Price, \$9.00; West of the Rockies, \$9.50.

Rees Jacks for Trucks

Many prominent manufacturers and operators of large fleets of trucks have adopted Rees Truck Jacks as their standard lifting tool equipment.

Rees Truck Jacks are made in a range of sizes which meet any truck needs. The same double worm-gear drive principle of power application as used in the Rees Automobile Jack is embodied also in the truck models.

All Rees Jacks are rated conservatively. They do their work easily with one man operating them, and have a reasonable overload capacity with an ample factor of safety.

A TOUCH of tire trouble on a cold, wintry day will convince any of your customers that the Rees Double Worm-Gear Drive Jack is worth many times its initial cost, because it is so convenient and saves time.

When a tire goes down, simply lift the Rees from the tool box, straighten the folding handle and attach it to the jack. The handle helps to slip the jack in place from a standing position. The heaviest car is raised quickly by a few easy turns of the handle and without getting down in the wet and slush.

A Big Sales Opportunity

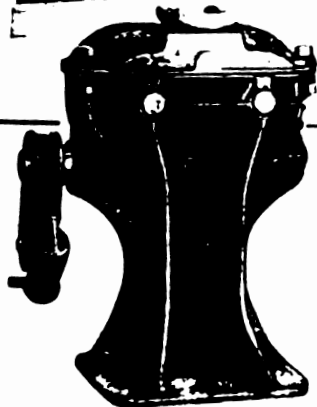

Every jobber and dealer should know about the great sales opportunity of the Rees Double Worm-Gear Drive Jacks. The available open territories are being closed with remarkable rapidity. The Rees Jack is nationally advertised and nationally known, and its acceptance in the motoring and industrial world has been phenomenal.

Remember that the Rees Jack comprises a complete line, including the widely popular automobile Jack, models for every motor truck need and other models for railway and industrial uses. The sale of any model Rees will build good will for you, and promote the sales of all other models.

On all Acme Trucks the No. 2 Pile-on Rees Truck Jack has been Adapted as Standard Lifting Tool Equipment.

REES JACK

THE makers of the famous Acme Truck early recognized that it was just plain good business to supply a jack that was absolutely dependable. Acme is one of the growing number of prominent truck and passenger car manufacturers who, after conclusive test, have adopted Rees Jacks as standard tool equipment.

The hearty acceptance of Rees Jacks by manufacturers and motorists alike is the unprejudiced reward of merit. It is the recognition of the superior efficiency of the *double worm gear drive principle* as here adapted for lifting purposes, and indicates that the jack is becoming properly considered *individually* as the most important equipment tool.

JOBBER — DEALERS

Your customers know about Rees Jacks. Our national advertising is telling them over and over again the story of its safety, power and convenience. There's a good margin of clean profit on the Rees Jack line, and every time a Rees is used it is a demonstration that sells more of them. If your territory is still open, there's a big sales opportunity for you in handling the Rees. Write for our proposition.
